Subject: Information disclosure statement Under  
37C.F.R. §1.56.

25 Dear Sir:

This is an Information Disclosure Statement in  
accordance with the duty to disclose information  
material to patentability under 37 CFR §1.56. The  
30 applicants wish to make of record each of the documents  
listed on the accompanying form PTO/SB/08.

**BEST AVAILABLE COPY**

Since the IDS is filed before the mailing date of a first Office action on the merits, consideration of the information disclosure statement is hereby requested according to 37C.F.R. §1.97(b). The prior art patents  
5 contained in the information disclosure statement were cited in the communication from the Intellectual Property Office of Japan, on October 4, 2005 for a counterpart Japanese patent application. Applicants sincerely hope that the examiner can consider the items contained in the information  
10 disclosure statement.

According to the requirement set forth in 37 CFR §1.98 and MPEP 609, applicants are submitting a copy of items contained in the IDS: Japanese Publication #JP  
15 P2000-013411A (published on Jan 14, 2000); and Japanese Publication #JP 1-155730 (published on June 19, 1989).

A translation of the abstract of the Japanese publication #JP P2000-013411A is as follows: To  
20 respectively individually control the outputs of respective speakers concerning a broadcasting device to be used for the private broadcasting facility of a building or the like. Plural pieces of speaker terminal equipment 31, 31 ..., are connected through a bus to a  
25 transmission line 1 for broadcasting in digital broadcasting line configuration. Data provided by multiplexing plural pieces of acoustic data provided from a microphone 21 or playing equipment 22 in time division manner control data for controlling which  
30 acoustic data are to be outputted from the respective speakers 31, 31 ..., are inputted to the transmission line 1 from the main equipment 23. On the side of respective pieces of speaker terminal equipment 31, 31 ...,

according to the control data, any one of respective acoustic data is selected, converted to sounds and outputted. In this case, in addition to the speaker terminal equipment 31, various kinds of terminal equipment 41-81 are connected through a bus to the transmission line 1 and these pieces of terminal equipment 41-81 are controlled by a main unit 23 as well.

10 A translation of the abstract of the Japanese publication #JP 1-155730 is as follows: To simplify the title equipment by multiplexing plural video signals and audio signals and sending the result through a signal transmission line means. Signals being the result of digital conversion of plural signals and a signal SCA being the result of time division multiplex processing to a control data DC1 are obtained from an output terminal O of an encoder 3, the signal SCA is supplied to a modulator 5d and AM-modulated by the VSB system. Moreover, the video signal obtained at a terminal V of video tape recorders 1a~1c fed respectively to modulators 5a~5c and AM-modulated respectively by the VSB system. The output signal of the modulators 5a~5d is fed to a mixer 6, where it is subject to frequency multiplex. Then the signal SMF subject to frequency multiplex from the mixer 6 is fed to one end of a leakage cable 11 being a component of a 2-way signal transmission means via a branching device 7.
